DESCRIPTORS: *Fisheries, *Fishes, Abundance,
*Tuna.

In order to estimate the abundance of fish population
simply as well as accurately, the author made some
considerations about the stratification of the fishing
ground. The data used are those about Albacore

In this first report the author deals with preliminary
check of the data necessary for the analysis as well as
the way how to select the factors, setting up six model
strata which are 20 square of the sea and one month for
albacore catch in the North Pacific as a sample. (Author)
